v1.1.0 from 2024/08/13

## Abstract

The LaTeX package `catppuccinPalette` provides new colors for `xcolor`.

## 1 Introduction

Catppuccin<sup>1</sup> is a soothing pastel theme in 4 flavours/styles (*Latte*, *Frappé*, *Machiato*, *Mocha*). This package defines these themes as `xcolor` colors.

## 2 Usage

Load via `\usepackage{catppuccinpalette}`

Just use the new colors (prefixed with `Ctp<Style>`) like normal `xcolors`. In addition to the usual colors of the palette, this package defines some colors according to the style guide<sup>2</sup> for ease of use.

This package also allows you to set a specific style which sets the shortened color names (prefixed only with `Ctp`) to the selected style (allows for easy switching style) via the package option `style`.

This package loads `xcolor` (without options) so if you want to set some `xcolor` options you should load `xcolor` before loading this package.

## 2.1 Package options

<i>Option</i>	<i>Description</i>
<code>style</code>	set the style used by the shortened prefix (Ctp). Possible values: <b>Latte</b> (default+initial), <b>latte</b> , <b>Frappe</b> , <b>frappe</b> , <b>Mocha</b> , <b>mocha</b> , <b>Macchiato</b> , <b>macchiato</b> As a shortcut, you can also just use e.g. <code>\usepackage [latte]{catppuccinPalette}</code> as a shorthand for <code>\usepackage [style=latte]{catppuccinPalette}</code>
<code>textcolor</code>	set the default textcolor of the document to CtpText. Possible values: <b>false</b> (default+initial), <b>true</b>
<code>pagecolor</code>	set the pagecolor of the document to CtpBackground. Possible values: <b>false</b> (default+initial), <b>true</b>
<code>hyperref</code>	style hyperref according to the style guide <sup>3</sup> . Possible values: <b>false</b> (initial), <b>true</b> (default)
<code>styleAll</code>	shortcut for setting <code>pagecolor</code> , <code>textcolor</code> and <code>hyperref</code>

### 2.1.1 Change settings mid-document

`\CtpReinit` `\CtpReinit[opts]`

This command allows to reinitialize this package. All previous configuration options will be kept. In particular this allows to change the active style/flavor mid-document. Note that if you decided this package should change the background color when loading the package and only do `\CtpReinit[style=<another style>]`, then the background color will also be adjusted on reinitialization.

The command processes the same options like the ones you can pass when loading the package (see documentation above).

## 2.2 Colors

**Note:** The colors with the prefix **Cat** are deprecated and will be removed in a future version!
